

This documentation contains charts from Dr. Altrock's work until 1996.

Due to an increasing number of tinnitus patients and her growing age the recent results were taken down, but not evaluated.

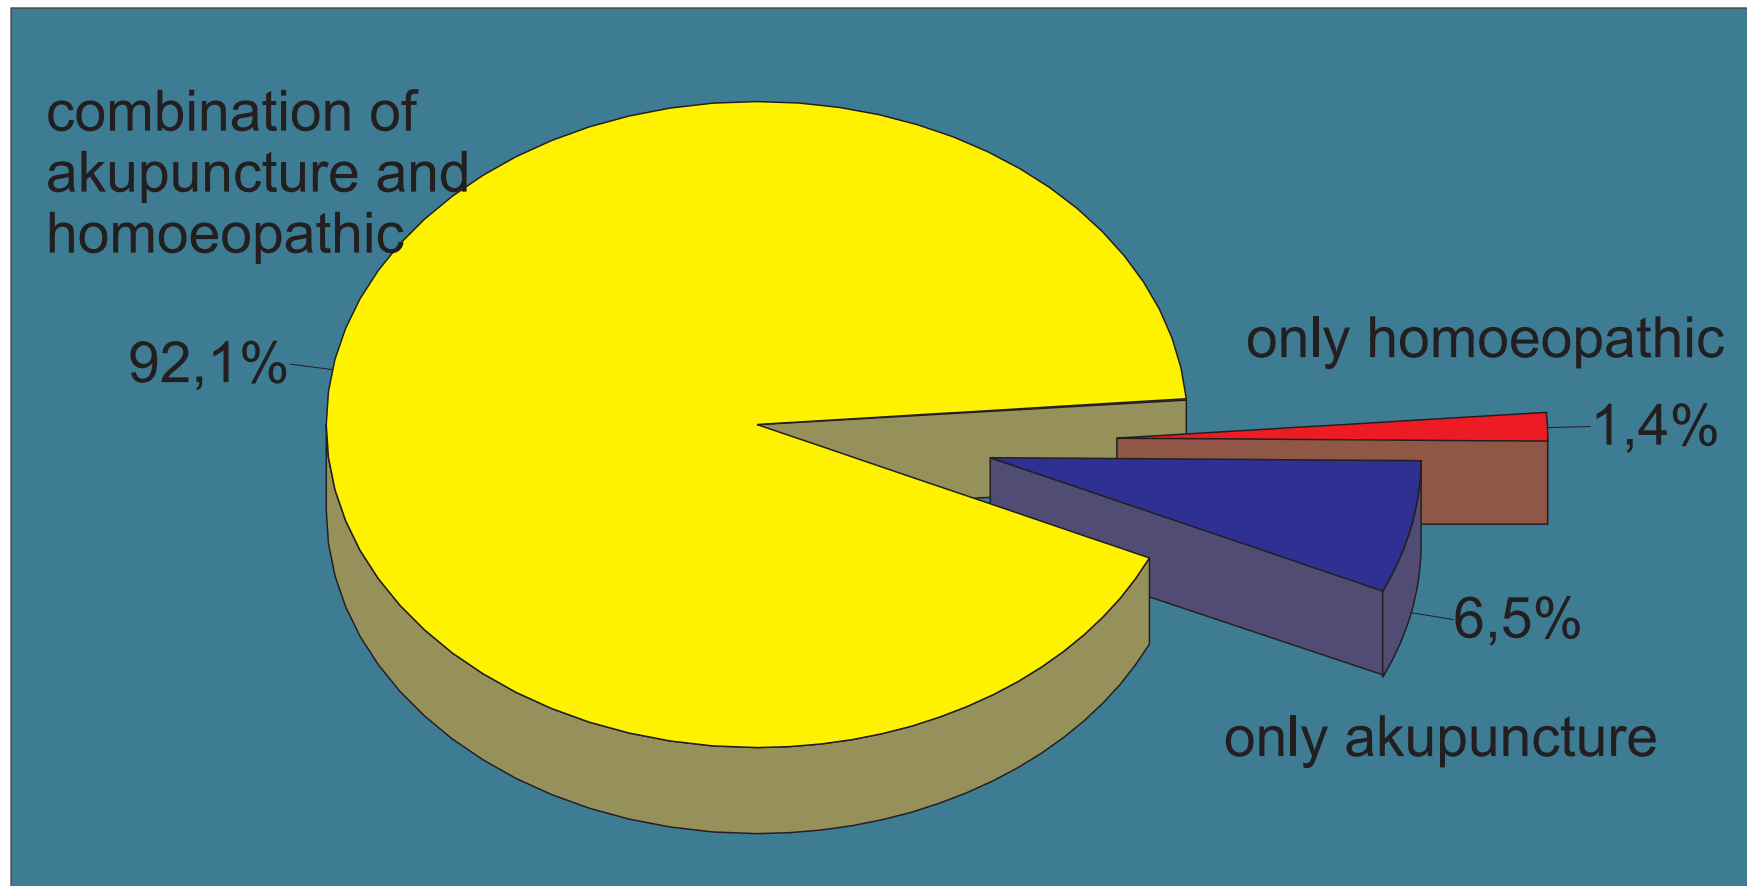

Now, having treated nearly 2000 tinnitus patients, she says: "With growing knowledge and experience, the results constantly keep getting better."

Since 1996 Dr. Altrock has improved her methods considerably, especially in the first two points: dental problems (incl. non compatible or toxic dental materials such as amalgam) and allergies. With patients showing only "average" or "fair" results in the chart, success has grown considerably. Dental problems moved on top of the list.
