

This documentation contains charts showing results of Dr. Altrock's work until 1996. Due to an increasing number of tinnitus patients and her growing age the recent results were taken down, but not evaluated.

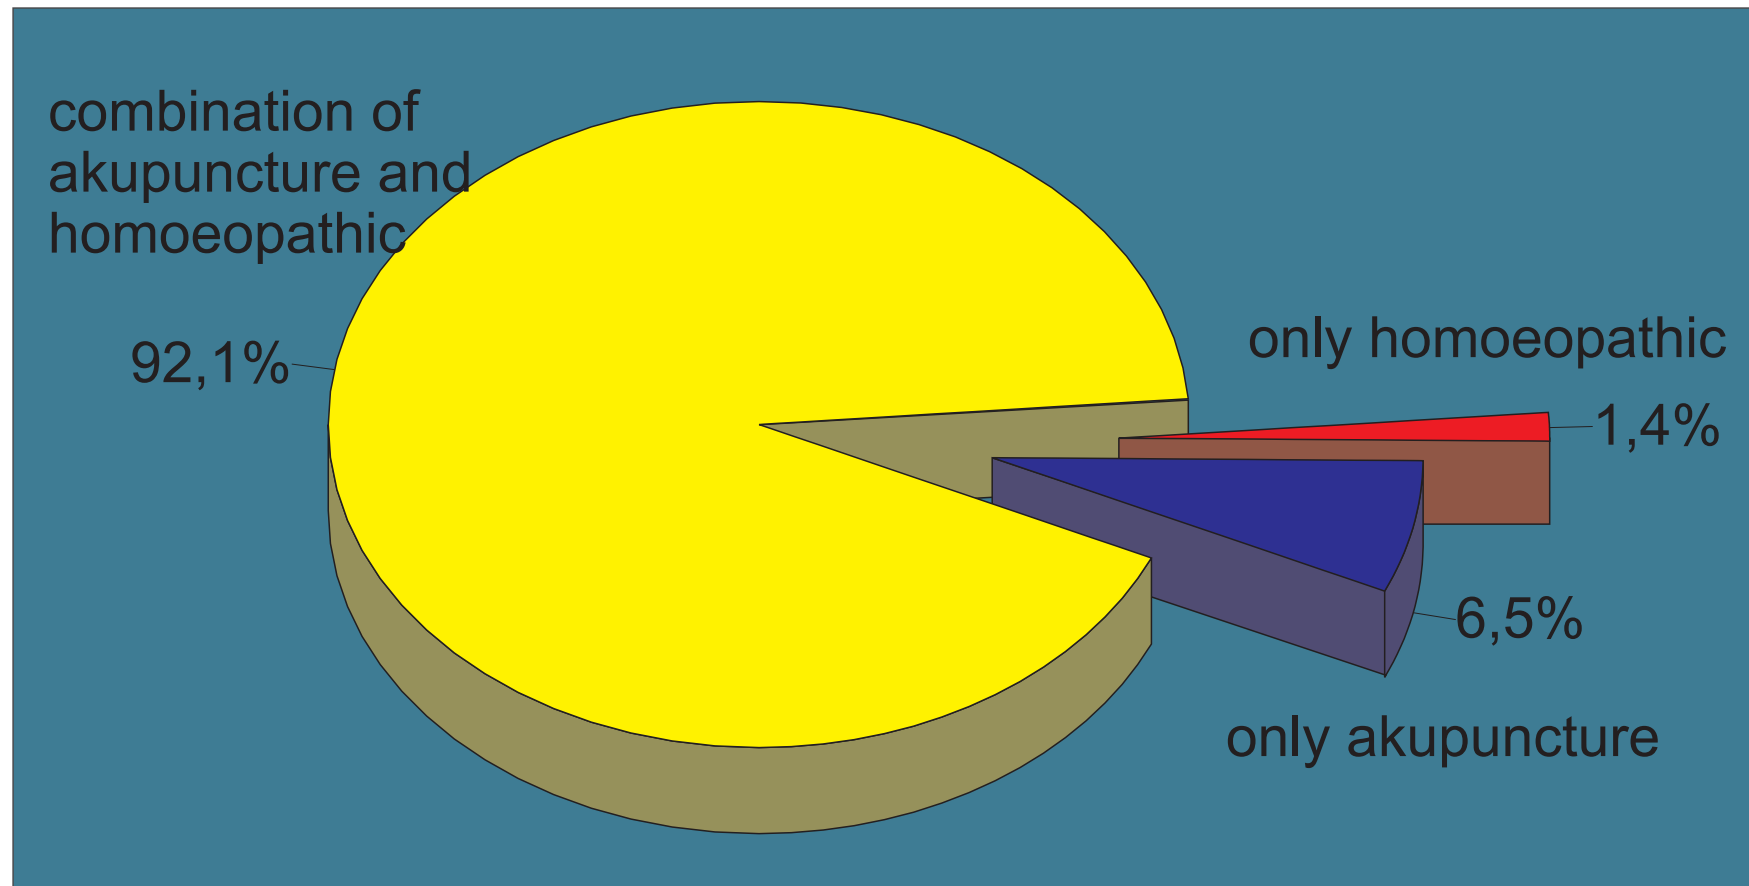

Now, having treated nearly 2000 tinnitus patients, she says: "With growing knowledge and experience, the results keep getting better."

This may be explained by the fact that Dr. Altrock improved her methods considerably, especially in the first two points: dental problems (incl. non compatible or toxic dental materials) and allergies. With patients showing here only "average" or "fair" results, success has grown considerably!
